Sabrina,

All of the data from the data summary I sent you yesterday is from the file I pulled off scribe.net that contains Bill's samples. I am not certain if it was validated, but assuming it was because there appears to be a delay in posting data to scribe (June was the most recent available data). I will get in touch with Bill to double check with him.

The data from our sampling has not been published to scribe. I will post it once it is validated. The data summaries for sediment and water I am going to email to you shortly will be with unvalidated data. I will put some disclaimers on them so you can share them with whoever you need to.

There are currently 2 Animas databases set up in Scribe.net right now. One (named animas) contains Bill's data and the other (named animasSTART) contains our sample information. Rebecca and I could not access the animasSTART database, but going under the assumption that there is no data in it yet, with the exception of field parameters, because it was last updated in early November. Rebecca put in a call to Marty to get the access information for animasSTART so we can confirm our assumptions.

We can either combine the two databases or leave them separate. If combined, you will be able to tell who sampled what by the "sampler name" field or by the event ID. Combining them would probably make it easier for you, because you would only have one scribe file to work with and update.

Let me know if you have any other concerns about the data!

Megan, I am at the NPL panel meeting in Philly, but hope to review this this evening. Thanks for sending it along.

Can you confirm for me that all the data that gets put into Scribe has been validated?? I ask because the regional lab should be reviewing/validating the water quality data but I think ESAT was entering all the data into Scribe. I also need to understand how to differentiate the START collected and entered data from the R8/ESAT data in Scribe.

Ultimately I need to be able to release the Scribe database to the ARSG and FOIA requestor, so it must be validated data before the public can get to it.

Thanks!

Sabrina

Sabrina,

The 2010 Animas data summary is attached.

Please advise me of any changes needed.

I am finishing up some details on the sed and water data and will get it to you tomorrow.
